## LINKS & REPOS

- › [ChatGPT Nexus Repo](#)
- › [NexBryte \(In Progress\)](#)
- › [GitHub Profile](#)
- › [LinkedIn Profile](#)

## EDUCATION

**B.Tech in Computer Science**  
**Scaler School of Technology**  
*Second Year*

**BS in Data Science**  
**IIT Madras**  
*Currently Enrolled*

## TECHNICAL SKILLS

### Languages

TypeScript JavaScript Rust  
Python Java SQL

### Frameworks & Libraries

React Next.js  
React Native (Expo)  
Tailwind CSS

### Backend & Database

Supabase Convex  
PostgreSQL

### Developer Tools

Git Linux Manifest V3  
Chrome Ext APIs Vercel Bun

### AI & Automation

Browser Automation  
LLM Integration REST APIs

## RELEVANT COURSEWORK

## FEATURED PROJECTS

### ChatGPT Nexus Flagship Project

#### Open-Source Cross-Browser Productivity Extension for ChatGPT

- Built a **Manifest V3** extension architecture supporting Chrome, Edge, Firefox, and Safari with a unified codebase.
- Engineered major modules within a codebase spanning **320+ source files** and **~81k lines of TypeScript/React** code.
- Developed **20+ core features** including Prompt Manager, Smart Folders, Timeline Navigation, Export Engine, and Cross-Conversation Favorites.
- Optimized runtime performance via **lazy loading**, **custom DOM batching**, **MutationObservers**, and targeted storage caching.

### NexBryte Systems / Rust

#### Custom Linux Distribution built with Rust (Work in Progress)

- Developing a custom Linux distribution, including a **custom ISO**, **branding**, and **native Rust system utilities**.
- Built high-performance native desktop utilities, including a dedicated **File Manager and Settings app in Rust**.
- Exploring Linux kernel internals, OS boot processes, system initialization, and low-level systems programming.

### Can-Control AI Agent

#### Autonomous AI Browser Automation Agent

- Built an intelligent browser agent leveraging **Browser Use** to execute complex, multi-step browser workflows.
- Enabled autonomous browser interaction driven entirely through natural-language task execution.
- Integrated LLM reasoning capabilities with real-time DOM actions to navigate and automate multi-page interactions.

## OPEN SOURCE & COMMUNITY

- **Open Source Journey:** Actively building a presence in open source, with early contributions to public repositories.
- **Scaler+ Browser Extension:** Contributed key product features, UI optimizations, and bug fixes to the official Scaler+ extension.
- **Workflow & Collaboration:** Navigating collaborative Git workflows including fork/pull request cycles, code reviews, and issue triage.
